

SKF
RecondOil

SKF RecondOil Distributor

Want your machines
to perform better?
Don't change oil

SKF RECONDOIL

This ground breaking technology can change the way we view industrial oils from a costly consumable to a fully circular asset.

SKF RecondOil does not replace conventional filters. Instead, it is an addition that takes you beyond conventional filtering. The oil becomes cleaner than ever before and by removing even the smallest contaminants, it prevents oil from aging. This means that the same oil can be used again and again.

You might never have to buy new oil again or dispose of used oil. RecondOil reduces your carbon footprint, boosts performance, and extends machine lifespan, saving money and benefiting the environment.
